

# Response per nominal SiPM face area

Ten steel/tile modules; four layouts; nine fixed 0.5 mm inter-module gaps

N = 1,000 neutrons/configuration (10 x 100); 24,000 total. Pooled whole-event percentile bootstrap, B = 10,000.

95% descriptive intervals. Area = 10 x sensors/layer x 2.4² mm²; not PDE or a causal placement adjustment.
